CHIEF OF STAFF · STRATEGY & BUSINESS OPERATIONS · FINTECH / AI

EDUCATION

University of Michigan, Stephen M. Ross School of Business — Master of Business Administration 2022–2024 · Ann Arbor, MI
The London School of Economics and Political Science — Executive Coursework in Economics, Markets & Public Policy 2024 · London, UK
Indian Institute of Technology — Bachelor of Technology, Computer Science 2010–2014

CORE COMPETENCIES

Chief of Staff · Corporate & Competitive Strategy · Business & Revenue Operations · Strategic Planning & Annual Operating Plan (AOP) · Commercial-Model & Pricing Strategy · P&L Ownership & Unit Economics · Capital Allocation, M&A & Corporate Development · Investment Diligence & Deal Structuring · Stakeholder Management & Influence Without Authority · C-Suite, Investor & Board Communications · Cross-Functional Program Leadership · Organizational Design & Change Management · Operating Cadence, OKRs & KPIs · Executive Decision Frameworks (One-Way-Door, RAPID) · Go-to-Market & Market-Entry Strategy · Marketing & Sales Operations · Data-Driven Prioritization · Financial Modeling · SQL & Analytics

PROFESSIONAL EXPERIENCE

AWS 2024–Present | San Francisco, CA, USA

Principal, Strategy & Business Operations

Supply-Chain Regionalization & Operating-Model Redesign

- Acted as **strategy lead and de-facto chief of staff** for a **national → 8-region fulfillment redesign**, owning the end-to-end business case, board-grade decision memos, executive narrative, and **one-way-door decision framework** that secured cross-org sign-off from operations, finance, transportation, and product leadership.
- Re-sequenced **seller incentives, inventory placement, and network routing** across the fulfillment graph to reach **76% in-region fulfillment**; the program contributed to a **\$48.4B year-over-year free-cash-flow swing** and **7B+ items shipped same / next-day**, tracked against a single P&L and cost-to-serve model.
- Stood up the **cross-functional operating cadence** (weekly leadership business reviews, escalation paths, RAID logs, and single-source-of-truth dashboards) that kept **15+ teams** aligned to one prioritized roadmap and shortened decision latency from weeks to days.
- Authored the quarterly **strategic-planning and resource-allocation** narrative, translating ambiguous executive intent into measurable OKRs, headcount asks, and investment trade-offs.

Rakuten

2023 | Tokyo, Japan

Director, Corporate Strategy & Ventures

B2C→B2B Capital Redeployment Thesis & Corporate Development

- Authored and won executive-committee approval for a **\$50M capital-redeployment thesis**, reallocating investment from burn-heavy B2C super-apps to **B2B cross-border payment infrastructure** after a portfolio-wide **return-on-invested-capital** and cohort-economics analysis.
- Led full-cycle **corporate development**: market mapping, target sourcing, commercial and technical **due diligence**, valuation, and **deal structuring** for an acquisition that hit **EBITDA breakeven in 14 months** and held **1.5x book value** while comparable consumer bets were written down.
- Built the **board-facing investment narrative** and a **100-day post-merger integration plan**, including take-rate modeling, synergy targets, governance structure, and a value-creation scorecard reviewed monthly by leadership.
- Ran scenario and **sensitivity modeling** (base / bull / bear) to pressure-test the thesis and frame downside protection for skeptical stakeholders.

Microsoft

2020–2022 | Redmond, WA, USA

Senior Manager, Strategy & Marketing Operations

\$12M Marketing-Operations Yield Engine & Partner Market Development Funds

- Built and operated a **\$12M marketing-operations yield engine** as a single cross-functional operating system, unifying **Random Forest propensity scoring**, **W-shaped multi-touch attribution**, real-time budget traffic-shaping, API governance, and partner **Market Development Funds (MDF)** financing under one governance model.
- Delivered **\$50M incremental GMV at 4.1x ROI** and lifted **MQL→SQL conversion 5% → 24%** by reallocating spend in-quarter against live yield and pipeline data rather than fixed annual plans, with weekly stand-ups arbitrating trade-offs.
- Aligned **sales, finance, partner, and product** organizations behind one funnel, one forecast, and a shared definition of qualified pipeline, compressing the partner sales cycle to **85 days** and removing duplicate spend.
- Instituted the **operating cadence and reporting stack** (executive dashboards, pipeline reviews, MDF approval workflow) that made marketing spend defensible to finance and auditable end-to-end.

The D. E. Shaw Group

2016–2020 | New York, NY, USA & Hyderabad, India

Vice President, Strategy & Product

Firm-Wide Real-Time Risk “Gatekeeper” Program

- Led a firm-wide **real-time risk and capital-efficiency program** (Rust, Apache Kafka, Apache Flink, FPGA), setting a hard **latency budget** and a **Strangler-Fig migration** that replaced an overnight, retrospective risk process with instant, in-line trade enforcement under Basel III constraints.
- Orchestrated **alignment across trading, quant research, and compliance** functions that had operated in silos, using **shadow-mode validation**, a shared real-time dashboard, and explainable-risk logs to convert “I feel this is unsafe” debates into data-backed go / no-go decisions.
- Cut risk latency **90ms → 4.2ms**, **unlocked \$85M in idle regulatory capital**, reduced false positives **15% → 1.8%** (~\$400K/month operational savings), and scaled throughput **1M → 5.4M msg/sec**, sustained through live market crashes with zero dropped packets.
- Built the **executive ROI case** that justified the ~\$10M build, owned vendor-vs-build trade-offs, and ran the steering committee that governed phased rollout and risk sign-off.

McKinsey & Company

2014–2016 | London, UK

Engagement Associate, Strategy & Transformation

Institutional Commercial-Model Restructuring — Digital-Asset Prime Brokerage

- Restructured the institutional **commercial and pricing model** for a digital-asset prime brokerage, **aligning four C-suite leaders** (Head of Institutional, COO, CFO, VP Product), each with a competing objection, through a **Blocked-Revenue tracker**, a **Shadow-Pricing pilot**, and a **Three-Horizons framework**.
- Designed a **maker-taker, tiered fee structure** and liquidity flywheel that grew institutional trading volume **\$215B → \$371B** and recurring revenue **\$45M → \$213M**, engineering the volume “flip” past the retail book and underpinning a flagship enterprise partnership.
- Drove the **change-management and stakeholder-influence** plan end-to-end, sequencing a shadow pilot to de-risk a skeptical leadership team and build consensus before full migration.
- Owned the **executive storyline, board materials, and quantitative model** (elasticity, take-rate, contribution margin) that turned a contested pricing change into a unanimously backed commercial bet.
